

ReviTEAlised

Compost TEA

ReviTEAlised is an aerobic bio stimulant or compost tea. It is blended from several different sources of carefully composted ingredients including some worm cast compost. It is blended to give a more diverse range of Bacteria, Fungi and Protozoa than green matter compost alone. This helps in the suppression of a wider range of diseases.

In simple terms it is a pro- biotic for plants. It works by boosting the good biology (Bacteria, Fungi and Protozoa) that should be present both on the plants surfaces (leaves and roots) and in the soil. Thus allowing all the processes and interactions in the soil food web to function as they should.

Diseases are suppressed by making sure there are beneficial organisms there to occupy any infection site on the plant and to then out compete incoming disease causing organisms. The beneficial organisms will also consume the food sources supplied by the plant thus denying any incoming disease causing organism an easy meal.

ReviTEAlised is supplied in a concentrated form. All you need is a simple brewer to extract and grow the "good" biology. Then you just dilute your concentrated tea with water and spray or water it on like a liquid feed or pesticide.

ReviTEAlised can help with all of the following:

- Suppress Diseases
- Unlock Nutrients and make them available to the plant
- Reduced nutrient leaching
- Improve water retention in soil /compost
- Make plants healthier and more resistant to attack
- Extend root network
- Suppress some Pests
- Improve soil structure
- Improved germination
- Decompose toxic compounds
- Reduced need for conventional pesticides

As we lose chemicals there is pressure on us all as growers to use safer methods of pest and disease control. Compost Tea is in it's early stages of scientific understanding but some science does already exist to back up it's claims. There is more in depth explanation of the science on our web site http://www.xlhorticulture.co.uk/html/compost_tea.html

ReviTEAlised is safe for you, your operators and your customers, and will allow you to reduce the amount of expensive pesticides and fertilisers you use . It can be applied with your irrigation so no special application equipment is needed. It is made in the UK by LCP professional who have a great deal of expertise and experience in compost tea.

Growing Better Crops Doesn't have to cost the Earth
